### RESTRICTION

1. This restriction is response to the amendment filed on 2/26/04.

Restriction to one of the following inventions is required under 35 U.S.C.121:

- I. Claims 1-6, drawn to control power level or recreation vehicle by controlling the amp service level, classified in class 318, subclass 139.
- II. Claims 7-70, drawn to a network control system of plurality of devices in a vehicle; network load control node associated with plurality of device, classified in class 340, subclass 286.01.

2. Inventions I, and II, are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because claims 1-6 disclose control power level or recreation vehicle by controlling the amp service level. The subcombination has separate utility such as claims 7-70 disclose a network control system of plurality of devices in a vehicle; network load control node associated with plurality of device.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purpose as indicated is proper.
